Standardization of MCC Datasheet Format from Revision 5 Onwards

Dear Valued Customer,

MCC is pleased to inform you that we are implementing a standardized format for all product datasheets, effective from Revision 5 onward.

As part of this initiative, the following updates have been made where applicable:

1. Standardization of Datasheet Format

A unified layout has been adopted across all product lines to ensure consistency and ease of reference.

2. Parameter Updates

Static and dynamic parameters may be subject to updates based on additional bench testing data obtained from a larger sample size. Please note that the wafer design and back-end manufacturing processes remain unchanged.

3. Expanded Graphical Data

Additional performance graphs have been included to provide better insights into product behavior.

4. Package Outline Drawing (POD) Dimension Updates

POD dimensions have been reviewed with reference to JEDEC standards, and tighter tolerances may be applied where applicable. Solder pad layouts have been standardized for improved design compatibility.

Should you have any questions or require further information, please do not hesitate to contact your local MCC Sales Team. We are always happy to support you.

Thank you for your continued trust in MCC.

Sincerely,

[Director of Quality]

Micro Commercial Components (MCC)
